Office Action Summary

Application No.

09/828,770

Applicant(s)

GIOVINCO ET AL.

Examiner

Tam D. Tran

Art Unit

2676

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 April 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-29 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-29 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 2,3,4. 6) ☐ Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Baxter et al. (USPN 6489961 B1), hereinafter simply Baxter.

2. In regard to claim 1, 16, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, see col.3 lines 15-20, said method comprising: positioning a screen at a first angular position in which said screen is coplanar with an entry plane; see col.6 lines 26-30; selecting a first voxel corresponding to an intersection of said desired line with said entry plane; see col.3 lines 33-40; selecting a second voxel corresponding to a projection onto said entry plane of an intersection of said desired line with an exit plane intersecting said entry plane; see col.3 lines 42-49; defining a connecting segment that connects said first voxel and said second voxel; and rendering selected voxels on said screen to rasterize said connecting segment; see col.3 lines 17-32.

3. In regard to claims 2, 17, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, wherein rendering

Art Unit: 2676

said selected voxels comprises uniformly illuminating said selected voxels. See col.12 lines 63-65.

4. In regard to claims 3, 18, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, wherein rendering said selected voxels comprises rendering said selected voxels according to a selected illumination pattern. See col.12 lines 63-65.

5. In regard to claims 4, 19, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, further comprising selecting said illumination pattern to assign an illumination level of at least one of said selected voxels to be substantially zero. See col.9 lines 54-60.

6. In regard to claims 5, 20, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, further comprising selecting said at least one of said selected voxels from a group consisting of said first voxel and said second voxel. See col.13 lines 5-12.

7. In regard to claims 6, 21, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, further comprising continuing to render said selected voxels while rotating said screen from a first angular position in which said screen is coplanar with said entry plane to a second angular position in which said screen is coplanar with said exit plane. See col.13 line 15-col.14 line 10.

8. In regard to claims 7, 22, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, wherein selecting said first voxel comprises: obtaining constants that define said line in Cartesian coordinates;

Art Unit: 2676

obtaining an angle descriptive of said angular position of said entry plane; and on the basis of said constants and said angle, performing a trigonometric to transformation to determine cylindrical coordinates of said intersection of said desired line with said entry plane. See col.12 lines 24-32.

9. In regard to claims 8, 23, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, wherein performing said trigonometric transformation comprises obtaining a value of a trigonometric function of an argument from a look-up table. See col.6 lines 25-33.

10. In regard to claims 9, 24, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, further comprising generating rotated coordinates corresponding to said first voxel, said rotated coordinates corresponding to rotation about a selected angle. See col.6 lines 25-30.

11. In regard to claims 10, 25 Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, further comprising projecting said rotated coordinates to correct for keystoneing. See col.6 lines 25-30.

12. In regard to claims 11, 26, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, further comprising generating projected coordinates corresponding to said first voxel, said projected coordinates being obtained by correction for keystone distortion. See col.2 lines 11-22.

13. In regard to claims 12, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, wherein said look-

Art Unit: 2676

up table has a number of entries that is at least double the number of angular positions at which said screen can be positioned. See col.12 lines 24-32.

14. In regard to claims 13, 27, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, wherein rendering said selected voxels on said screen comprises applying a Bresenham algorithm to obtain said selected voxels on the basis of said intersection of said desired line with said entry plane and said projection onto said entry plane of an intersection of said desired line with an exit plane. See col.3 lines 15-49.

15. In regard to claims 14, 28, Baxter teaches a method for rendering, on a volumetric display having a plurality of voxels, a rasterized line that approximates a desired line, further comprising: providing a first processor dedicated to carrying out said rendering of selected voxels on said screen to rasterize said connecting segment; and providing a second processor in communication with said first processor to provide said first processor with information indicative of said desired line. See col.3 lines 15-50

16. In regard to claims 15, 29, Baxter teaches a method of rendering a desired line in a volumetric display having a rotatable screen, said method comprising: stepping said rotatable screen through a sequence of angular positions; see col.12 lines 24-32; and at each angular position, rendering, on said rotatable screen, a rasterized approximation of a line segment containing an intersection of said desired line and said rotatable screen. See col.13 lines 15-20.

Art Unit: 2676

Conclusion

17. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Tam D. Tran** whose telephone number is **703-305-4196**. The examiner can normally be reached on MON-FRI from 8:30 – 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Matthew Bella** can be reached on **703-308-6829**.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 872-9314 (for Technology Center 2600 only)

Hand-delivered response should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.
